HCTech Consulting Inc. Empowers Organizations To Make Timely and Informed Employee Satisfaction Decisions

Downers Grove, IL - February 21, 2003 – HCTech Consulting Inc. introduces the "Employee Satisfaction SNAPSHOT" designed to assist organizations to accurately and quickly assess employee satisfaction. Research has proven that satisfied employees decrease turnover costs, increase productivity and improve customer satisfaction. Because of the positive benefits produced by improved employee satisfaction, employee satisfaction assessments have become a necessary business intelligence tool.

Many organizations recognize the importance of improving employee satisfaction but face many challenges such as, allocating the valuable resources needed to design employee satisfaction survey questions, administer the survey process, gather the results, and report the findings. The SNAPSHOT was developed to streamline the process of gathering employee satisfaction intelligence while relying on a minimal amount of internal organizational resources.

In 30 days, the SNAPSHOT produces a customizable web-enabled employee satisfaction survey, quickly and conveniently collects the survey data, professionally aggregates and analyzes the results, and produces an easy to understand report. Since the SNAPSHOT is a web-enabled tool, users can easily access it from any standard web browser, whether they are at the office, at home or on the road.

"Ultimately, our objective is to help companies identify employee satisfaction issues in a short time period using the most efficient manner possible" says Stratis Bahaveolos, president of HCTech Consulting Inc.

HCTech Consulting is an information technology services firm that specializes in improving business intelligence. Many of our services and tools focus on improving our client's ability to monitor business critical functions in order to better understand and react to issues.
